

### Seminar Agenda

At Melin Consultants our mission is to make the stress of complying with Part L regulations, BREEAM standards and other assessments a thing of the past.

We've been providing energy modelling calculations for local authorities, architects, builders and developers for a number of years.

Along with a background in construction, all of our staff have a wealth of technical experience, developing close relationships with our clients' design teams.

Covering both commercial and residential projects, our technicians can offer specialist guidance on low carbon solutions. From a commercial perspective, any problems are approached with an emphasis on reducing a building's carbon emissions through sustainable design.

We can offer a range of CPD seminars and workshops to anyone who wants a better understanding of sustainable design, compliance and assessment, many of which are free of charge. Delivered in a simple, concise format, with an emphasis on facts and solutions, our experienced presenters believe in practicing what they preach, which is why they all still have 'normal' jobs in their specialist fields.

### Agenda

The format of our seminars can be tailored to suit your requirements.

#### Planning for BREEAM (1hr)

What exactly is BREEAM?  
Background of assessment methodology  
Policy drivers  
Impacts for the design team  
An insight into some key credits

#### Q&A session

#### Principles and Techniques of Air Tightness Testing (1hr)

Part 1 – CPD Seminar  
Air leakage in context  
Steps to better fabric

Requirements for building control  
Identifying leakage routes  
Preventative measures  
Case study - Examples of recent projects

#### Q&A session

#### Part 2 - Practical demonstration

Demonstration of equipment  
Looking for leakage routes

#### Introducing Part L 2013 (1hr)

Current benchmarks  
SAP & SBEM overview  
Key changes to Part L1  
Key changes to Part L2  
Work in existing buildings be achieved?  
Case Study - Example of a live project

#### Q&A session
